

QBraille XL

One Display for Every Device

HIMS
Lifestyle Innovation

The QBraille XL is a full-featured braille display that works great with smartphones, tablets, and computers. Enjoy comfortable braille reading, intuitive braille input, and easy switching between all the devices you use. Works with Windows, Mac, Chrome OS, iOS, iPadOS, and Android.

A Unique Blend of a Perkins and QWERTY Keyboard.

QBraille XL represents an entirely new type of 40-cell Braille display. The QBraille XL replaces the need for special keystrokes with the intuitively placed function keys found on all QWERTY keyboards. With the QBraille XL, closing an application means simply pressing the dedicated and familiar Alt+F4 buttons.

40-Cell Braille Display

HIMS is known for building braille devices with incredible build quality, and the QBraille XL is no different. With 40 cells and superior craftsmanship, the QBraille XL can be your next favorite braille display.

Maximize Productivity

Only the QBraille XL lets you use standard keyboard commands with a Perkins keyboard. Want to bold some text? Press Control and B. Want to close an application? Press Alt and F4.

Built-in Applications

The QBraille XL isn't your typical display. Included are applications such as a Notepad, DAISY Reader, Calculator, Alarm, Stopwatch, Countdown Timer, and Calendar.

Intuitive Hybrid Keyboard

The QBraille XL keyboard includes the Perkins style keyboard you know and love, as well as all of the QWERTY system and function keys that make using your computer easy.

Maximum Connectivity

Connect to 6 devices at the same time with Bluetooth. Even better, switch between all six devices with a single keystroke.

Screen Reader Compatible

The QBraille XL works great with the most popular screen readers, including JAWS, NVDA, Dolphin, VoiceOver for Mac and iOS, BrailleBack for Android, and more.

QBraille XL Specifications

1. Dedicated keys to quickly switch between 6 devices and toggle hybrid mode on and off.
2. Function and Control keys for intuitive use with operating system and application keystrokes.
3. Navigation keys to quickly move around documents, webpages, and more.
4. Control keys support multiple layouts, including Windows and MacOS.
5. Arrow keys for intuitive and easy navigation.
